MEDICAL CENTER®

Wake Forest University Baptist Medical Center's team of plastic surgeons have expertise across a broad range of specialties. Back row (L to R): Joseph Molnar, MD., PhD., Assistant Director of NCBH Burn Unit, James Thompson, M.D., Anthony DeFranzo, M.D., and Lisa David, M.D. Front row (L to R): Malcolm Marks, M.D., Chair, Plastic and Reconstructive Surgery, and Louis Argenta, M.D., Chair Emeritus, Plastic and Reconstructive Surgery.

When world-class traumatic wound or burn treatment is needed in Winston-Salem, only one institution has the skill and experience necessary to immediately offer an unparalleled caliber of care... which is why it's also the region's choice for beautiful results through elective cosmetic surgery.

With six board-certified plastic and reconstructive surgeons, a Level One Trauma Center and one of only two Burn Units in the state, the Department of Plastic and Reconstructive Surgery at Wake Forest University Baptist Medical Center is Winston-Salem's hometown hospital with an international reputation for excellence and patient-centered care.

"We have methodically built a team of plastic surgeons with expertise across a broad range of specialties," says plastic and reconstructive surgeon James Thompson, M.D. "From congenital facial defects and sophisticated craniofacial reconstruction through wound management and a complete array of cosmetic surgery, we provide our patients with the highest level of service possible in a single multidisciplinary location."

Beautiful Results with Plastic Surgery

"Our department not only applies the most up-to-date treatments to such problems as hair restoration and microsurgery, but has also developed devices and techniques that are used by other surgeons throughout the world. Our treatments are not only current but when necessary are truly innovative," says Joseph Molnar, M.D. "Because we perform even the most complex procedures for burns and other traumatic wounds, our team is especially talented in creating natural results through plastic surgery," notes plastic and reconstructive surgeon Lisa David, M.D. "What's

more, we apply our expertise to a full range of aesthetic services, including Botox®, fillers, laser surgery, breast augmentation, liposuction and more. Aesthetics can be applied to multiple procedures. Endoscopic carpal tunnel releases provide excellent treatment with an almost imperceptible scar. Botox relieves migraine headaches along with improved cosmetics," per Dr. Anthony DeFranzo.

"We're also actively involved with the Breast Center and provide all modalities of breast reconstruction following mastectomy," adds Department of Plastic and Reconstructive Surgery Chairman Malcolm Marks, M.D. "Restoring physical appearance through plastic surgery can make a significant positive impact on an individual's confidence and quality of life, which is what we want for each our patients."

Educating the Future

As members of an academic institution, Drs. Marks, Argenta, DeFranzo, Molnar, David, and Thompson not only play an active role in the

Why is Board Certification Important?

When choosing a plastic surgeon, board certification is a vital consideration. A surgeon certified by The American Board of Plastic Surgery has undergone stringent educational training beyond medical school. The board-certified plastic surgeons at Wake Forest, for example, have all been through up to nine years of additional training and proven themselves through one of the most rigorous certification processes in America. It's this level of experience and expertise that allows them to provide not only the most leading-edge procedures, but also to ensure each patient receives optimal results in the safest environment possible.

development of new treatments and technologies through clinical research, but they are also essential to the training and education of future plastic and reconstructive surgeons.

"We train our residents to achieve the same high standards we've set for ourselves," says Dr. Marks. "Everything we do is directed toward excellence in plastic and reconstructive surgery — both for the patients we see today and the legacy we leave to the future."
